Why use a Cabinetizer™?

Work safe even when going solo. Cabinets are a costly addition to any home or business. Not only are they expensive to purchase, they are heavy and awkward to install. Hang them safely and properly with the CABINETIZER™ Cabinet Lift. Install and transport cabinets without the struggle even when working alone.

Versatile and adaptive. The CABINETIZER™ adapts to the way you want to install: lift upper cabinets in place while you level and attach it to the wall (with or without base cabinets installed). Transport upper cabinets by loading it onto the unit. By converting the unit into a dolly, the base cabinets can be hauled to location. Either way you choose to transport, cabinets easily roll through standard doorways.

OPTIONAL ACCESSORIES

1013

The Drill Drive™ Model 1013 is the economical solution to power up your lift. This adapter allows you to use your drill to effortlessly lower and raise the lift while still maintaining the ability to be manually operated.

1424

Depth Extender Model 1424 is available for deeper cabinets. It includes both the collar and base extensions. Allows you to lift increased depths of 24" cabinets and objects weighing up to 150 lbs.

...more than a cabinet lift.

Use it to install: televisions, air-conditioners, heaters, microwaves, range hoods, shelves, garage organizers, electronic components, and of course, a variety of cabinets!

68-06

Upper Boom Extender Model 68-06 for extra tall jobs. Lift loads up to 8ft and weighing up to 150 lbs.
